

Newcastle University - Park View Student Village

Park View Village is a £75 million development for student accommodation at Newcastle University.

Project Profile

The project boasts 1,261 self-catered en-suite bedrooms in four, six, seven and eight-bedroom flats and 16 single studios across six residential blocks.

H Malone & Sons were chosen to deliver the M&E services to the modular construction. The contractor drew on the expertise of Pegler and its products to help deliver the domestic services and heating from a plant room to the individual en-suite bedrooms and communal facilities. Important to this project was the quality of fittings and valves used.

The products used included VSH XPress Copper and Pegler Valves. The heat free press-fit VSH XPress system ensured a clean and efficient installation whilst the valves provided the completed services offering greater energy control.

What H Malone & Sons said;

Dave Gourley, Project Director H Malone & Sons: "We are delighted to have installed the services for this modular construction with ease. We use Pegler products for a quality and reliable install and the level of support they offer. Our guys had onsite training which meant they all were fully up to speed with ensuring a perfect joint every time."
